Quantifying drought metrics, time scales, and tools to support management of different drought types in the Northeastern United States

A NOAA Climate Program Office (CPO) Sectoral Applications Research Program (SARP) funded project

Team: **Dan McEvoy (PI; WRCC/DRI)**, Mike Hobbins (CIRES/CU), Imtiaz Rangwala (CIRES/CU), Heather Yocum (CIRES/CU), Art DeGaetano (NRCC)

#### REGIONS

### Drought Early Warning

A Drought Early Warning System (DEWS) utilizes new and existing networks of federal, tribal, state, local and academic partners to make climate and drought science accessible and useful for decision makers.

### **Project Objectives**

- Identify the most effective drought indicators for various drought types in the Northeast DEWS region
- Integrate findings and data into the Northeast DEWS and incorporate into US Drought Monitor process, management, planning, and decision-making

http://nedews.nrcc.cornell.edu

## Which drought indicators and time scales provide the most information related to detecting early onset of crop stress?

Drought Indices Compared to NASS Annual Crop Yields: Corn Silage

Figure: Adam Xia, DRI

# How does snow drought impact the following spring and summer drought conditions?

- Impacts of more precipitation falling as rain instead of snow in a warming climate?
- Identify recent temperature-driven snow droughts
- Best spatial SWE estimates for snow drought tracking?

### Quantifying Flash Droughts in the Northeast

Maps based on Pendergrass et al. (2020; Nature) flash drought definition
